

SONIC MUFFS

Sonic Muffs are specially designed to protect sensitive cochlear of premature babies and to shield off background noise disturbances for a quieter developmental environment.

They fit comfortably around the baby's ears, the ergonomically designed shape and silicone base adhesive ensures that they are easy to secure, gentle to the skin and repositioning friendly.

- Reduces sound levels by at least 7 decibels (dB)
- 50% less sound pressure exerted on the cochlear
- 360° protection leaving no angle unattended

Ultra-Protection in high-Hazardous Environment

- Effectively protects neonates' immature cochlear during MRI
- Reduces disruptive noise during transfer of infants to different hospital units
- Provides quieter environment during transport in emergency vehicles

Application of Sonic Muffs are clinically demonstrated to positively impact infant by the effective reduction of noxious environmental stimuli within the nursery, which results in :

- more stable sleep pattern and sleep quality
- improved physiological stability of the babies
- decrease of respiratory rate
- optimal oxygenation
- decrease of pulse

Nominal dimensions : Inner Width x Height x Length : 2.856 x 3.493 x 0.787 cm
